SUBMERGED UPDATES!

to keep it simple, the true ending will NOT be released for the first submerged update. it’s kinda hard to make art and a slideshow as long as the base game for the true ending.

alongside this we’ll be releasing separate endings hopefully every week to entertain you just a bit, yuh.

thanks

- max

(Quasar Pierce)

- This is a glitch technique used to exploit the weak point of the target.
- When using this, you must channel the glitch energy to the point of contact and then instantly bring it back to the back of the weapon.
- The presence of glitch inside of the target causes extreme damage, and the body of the target adapts to it within a second. Removing the glitch causes even more damage, due to the body losing the glitch which entered it, effectively destroying the bonds holding the target together.
- The point of contact then becomes a quasar (thus the name) and implodes the target before sealing itself off after a 7 second delay.
- This technique is most effective against animate targets, but it is still powerful against inanimate targets as well.
